- Supervise maintenance technicians and provide guidance and training as needed.
- Develop and adhere to the current maintenance schedules to ensure equipment is properly maintained and repaired on a regular basis.
- Inspect equipment and facilities to identify maintenance needs and ensure compliance with safety regulations.
- Manage, maintain, and order an inventory of spare parts and supplies necessary for maintenance and repair work.
- Coordinate with production managers and supervisors to schedule maintenance and repair work during downtime to minimize production disruptions.
- Work effectively with outside contractors as necessary.
- Maintains working inventory of materials, parts, and supplies necessary to repair equipment, buildings, and grounds.
- Monitor equipment performance and identify opportunities for improvement in maintenance processes and procedures.
- Collaborate with other departments to ensure that maintenance activities are aligned with organizational goals and objectives.
- Maintain a safe work environment for maintenance personnel and ensure compliance with safety regulations.
- Must have complete understanding of PLC and Logic controls for high-speed automated equipment.

Essential Physical Functions:

- Ability to work in manufacturing environment.
- Ability to work long hours while standing or operating equipment.
- Ability to work in high temperatures at times.
- Ability to move/lift objects and materials of at least 40 lbs.

Qualifications:

- Four Year Industrial engineering degree or similar experience.
- 5 to 7 years' experience in supervising maintenance employees in a manufacturing environment.
- Effective interpersonal skills, including presentation, listening, and managing skills as required to work in and manage teams. Solid conflict resolution and problem-solving skills a must.
- Demonstrated management leadership skills.
